

Maksim Peshekhonov

Senior Frontend Engineer

Sochi, Russia · Email: kassady71@gmail.com · Phone: +79509196786 · Site: mpeshekhonov.ru · [Telegram: @makusimu_san](#) · [LinkedIn: makusimu](#) · [GitHub: mpeshehonov](#) · Date of birth: 28.05.1996

Available to start ASAP.

About

Senior Frontend engineer with 7+ years building React, TypeScript, and Next.js interfaces for enterprise systems, e-commerce, real-time products, and Telegram Mini Apps. Focus areas: complex workflows, RBAC, long forms, typed API contracts, GraphQL/REST, WebSocket, and design systems.

I am strongest where frontend is part of product architecture: shaping API contracts, splitting features into maintainable modules, reviewing code, and shipping to production. Sochi, remote. Available ASAP.

Work experience

POTALONU LLC — Frontend engineer

Sep 2025 – Jun 2026 | Remote

sendonate.com: React product for streamers: Mini App, dashboard, OBS overlay

Role: Designed the sendonate.com frontend: three React + Vite + TypeScript clients — streamer dashboard, Telegram Mini App, and OBS overlay. Evolved donation widget designs and dashboard flows, added a typed REST client via Orval/OpenAPI, real-time event delivery over WebSocket, and CI/CD for all clients from one repository.

Outcome:

- End-to-end donation flow shipped to production: Mini App, backend, streamer dashboard, and OBS overlay work as one product flow
- WebSocket overlay handles sequential donation events with alert queueing and reconnect without manual stream refresh
- Orval and one delivery pipeline reduce drift between clients and backend when API contracts change

Stack: React, TypeScript, Vite, REST API, Orval, WebSocket, Django REST, GitHub Actions, Sentry

POTALONU / PREEGLOS: Ticket storefront and hall layout editor

Role: Built PREEGLOS web storefront on Next.js with checkout, Auth.js, PostgreSQL/Drizzle, and typed REST client via Orval. Built the hall layout service: editor, seat data model, and embeddable seat picker for partner sites; GitLab CI/CD and Docker Compose delivery.

Outcome:

- Organizers can create venue layouts and sell seats through an embedded widget without custom drawing per event

- Ticket purchase in web and Telegram Mini App runs on one data model and API contracts
- Docker Compose and GitLab pipeline reduce manual work during production delivery

Stack: Next.js, React, TypeScript, PostgreSQL, SQL, Orval, Docker, GitLab CI, Auth.js

X5 Tech — Frontend engineer

Apr 2024 – Jul 2025 | Remote

NKZ 3.0 — procurement approval: Enterprise React module: RBAC, statuses, long forms

Role: Developed an enterprise procurement approval module on React + TypeScript: role-based access via Keycloak SSO, multi-step forms with react-hook-form, typed API layer via Orval/OpenAPI, and internal npm UI Kit components. Participated in task decomposition, code review, and split heavy flows into chunks via Vite code splitting.

Outcome:

- Frontend covers the full procurement cycle: roles, statuses, forms, and stage transitions
- OpenAPI/Orval made API contracts verifiable at build time and reduced manual type updates
- Code review, UI Kit, and shared form patterns kept complex flows consistent across tasks

Stack: React, TypeScript, JavaScript, Vite, REST API, Orval, Keycloak, Git, react-hook-form

BI.ZONE — Frontend engineer

Jun 2023 – Mar 2024 | Remote

Threat Intelligence: React + GraphQL analytics for SOC

Role: Extended SOC analytics interface on React + TypeScript: GraphQL/Apollo for core data model, MobX/React Query for state and queries, D3.js relationship graph, list virtualization, and Jest regression checks. Participated in code review, UX improvements for complex analytical flows, and optimization of heavy screens.

Outcome:

- Relationship graph, filters, and reports unified on one analyst workspace
- Single GraphQL/Apollo data layer for analytics and reports — fewer mismatches between screen and exports
- Virtualization keeps the interface responsive on large entity lists

Stack: React, TypeScript, GraphQL, REST API, D3.js, Jest, Git

NLMK — Frontend engineer

May 2022 – Jun 2023 | Remote

Cast iron release registration: React SPA replacing Excel for production data

Role: Built production SPA for cast iron release registration on React + TypeScript: TanStack Table filters, React Query server state, Keycloak SSO/RBAC for role-based access. GitLab CI checks on merge requests and Sentry for production error diagnosis.

Outcome:

- Core shift operations moved from Excel to a web interface with auth and role-based permissions
- Tables, filters, and server state support production data volumes and shift-based workflows
- Sentry provides production visibility: errors tied to releases and stack traces without on-site reproduction

Stack: React, TypeScript, TanStack Table, TanStack Query, REST API, Keycloak, GitLab CI, Sentry

Citilink — Frontend engineer

Apr 2021 – Apr 2022 | Remote

citilink.ru — online store catalog: E-commerce migration from PHP/Symfony to Next.js + React

Role: Contributed to citilink.ru e-commerce catalog and homepage migration from PHP/Symfony to React + Next.js: filters, sort, pagination, and URL state for SEO and sharing. Integrated REST API with backend and microservices, worked in yarn workspaces monorepo, covered critical logic with Jest tests, and participated in code review.

Outcome:

- Catalog SEO preserved on Next.js migration: indexable pages and URL-synced filter state
- Retail/wholesale flows via URL-synced filters, sort, and pagination
- Shared npm packages in yarn workspaces helped reuse logic between catalog and homepage

Stack: Next.js, React, TypeScript, JavaScript, REST API, Redux, Jest, Git

Skills

- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS/SASS, Python, Node.js
- **Frontend:** React, Next.js (SSR/SSG), Gatsby, Redux Toolkit, MobX, TanStack Query, TanStack Table, React Hook Form, Zod, react-router, Feature-Sliced Design, Tailwind CSS, CSS-in-JS / Emotion, jQuery, responsive layout
- **CMS:** Contentful, Strapi, WordPress, 1C-Bitrix, headless CMS, CMS integrations with Next.js/Node.js
- **Build & Git:** Git, Webpack, Vite, yarn workspaces, monorepos, npm packages, code splitting, GitLab CI, GitHub Actions, Docker, CI/CD
- **API & backend:** REST API, OpenAPI/Orval, GraphQL (Apollo Client), WebSocket, PHP, Symfony, MySQL, PostgreSQL, SQL, Drizzle ORM, Nest.js, Django REST, Bitrix components & templates, Keycloak, Auth.js
- **Quality & process:** Jest, Vitest, Playwright, Storybook, Sentry, code review, Scrum, Agile
- **UI & product:** e-commerce, design systems, UI Kit, Material UI, Figma, Telegram Mini Apps, i18next, next-intl

Languages

- English — B1
- Russian — native
