About

Senior Frontend / Fullstack engineer focused on complex UIs for B2B, e-commerce, marketplaces, real-time systems, and Telegram Mini Apps. I design and ship production-ready flows with many states, role-based access, typed API contracts, and integrations with REST / GraphQL / WebSocket.

Core stack: Next.js, React, TypeScript, Vite, TanStack Query, Orval + OpenAPI, React Hook Form, Zod, Radix UI, Tailwind CSS, Sentry, Playwright. For fullstack work I use Nest.js (REST, DTOs, Socket.io gateways, TypeORM, PostgreSQL, class-validator) and REST API integrations.

Highlights: X5 Tech — procurement approval module with RBAC and state transitions; NLMK — internal app for production data with tables and filters; BI.ZONE — Thread Intelligence (GraphQL, MobX, React Query, graph analytics and dashboards); Citilink — migrating e-commerce sections from Symfony to Next.js; commercial work — sendonate.com (Mini App + dashboard + real-time overlay) and zodiaclab.ru (Next.js + Nest.js + WebRTC).

Work experience

POTALONU LLC — Fullstack / Frontend engineer

Sep 2025 – present | Remote

sendonate.com — tipping for streamers (React 19, Vite, TypeScript, Telegram Mini App, REST, OpenAPI/Orval, TanStack Query, React Hook Form, Zod, Sentry)

- Designed and built three client surfaces: streamer web dashboard on React 19 + Vite + TanStack Query + Orval + React Hook Form + Zod + Sentry, Telegram Mini App on @telegram-apps/sdk + Vite, and a separate Vite bundle for OBS / live overlay.
- Implemented end-to-end tipping: Mini App payment flow (react-router, Context, useReducer), REST via generated Orval client from OpenAPI, dashboard with CRUD collections, pagination, debounced search, and alert settings.
- Built a real-time overlay on WebSocket with reconnect, alert queue, media preload (pako, Lottie), and TTS so tips render reliably on stream under bursty events.

zodiaclab.ru — marketplace and consultations (Next.js 15, React 19, TanStack Query, Orval, Radix UI, Tailwind CSS 4, axios, Nest.js, WebRTC, Socket.io, Coolify CI/CD, Playwright)

- Built the marketplace front end on Next.js 15 (App Router, Turbopack): catalog, cards, account, chats, content pages; TanStack Query, Orval from OpenAPI, React Hook Form + Zod, Radix UI, Tailwind CSS 4, Playwright e2e.
- Implemented audio/video on WebRTC: RTCPeerConnection, webrtc-adapter, simple-peer, Socket.io-client ↔ NestJS CallsGateway (webrtc_offer, webrtc_answer, webrtc_ice_candidate), ICE candidate queueing before connection init, STUN/TURN via REST API.

- Fullstack work on Nest.js (REST, DTOs, class-validator, TypeORM, PostgreSQL, JWT/Passport), keeping client-server contracts and real-time via CallsGateway and ChatsGateway.

POTALONU / PREEGLOS — ticketing platform and seat map (Next.js 16, React 19, TypeScript, PostgreSQL, Drizzle ORM, Auth.js, Docker, Docker Compose, GitLab CI/CD)

- Implemented the ticketing product web flows for POTALONU/PREEGLOS: events storefront, checkout journey, Telegram Mini App (@twa-dev/sdk), and client forms with React Hook Form + Zod.
- Designed and built a seats.io-like solution (seatmap studio): hall layout editor and public embed seat-picker on Next.js App Router + React 19 + TypeScript, data layer on PostgreSQL + Drizzle ORM, authentication with Auth.js.
- Set up self-hosted delivery for the seatmap service: Docker/Docker Compose, GitLab CI/CD pipeline (test, build image, deploy), and stage rollout behind nginx.

X5 Tech — Frontend engineer

Apr 2024 – Jul 2025 | Remote

- Designed and delivered an end-to-end procurement approval module (NKZ 3.0): RBAC, statuses, state transitions, drafts, and restoring user flows.
- Introduced Orval for types and API client from OpenAPI, removing manual contract updates and reducing front/back integration bugs.
- Built forms and editing flows with react-hook-form, extended the internal UI kit and shared UI patterns.
- Optimized the Vite build (code splitting, dynamic imports), improving initial load and responsiveness on long approval paths.

BI.ZONE — Frontend engineer

Jun 2023 – Mar 2024 | Remote

- Shipped features for Thread Intelligence: React 16, TypeScript, Webpack, MobX, React Query, React Hook Form, axios, styled-components, BEM, @bizone components, i18next; OpenAPI client via Orval; GraphQL with Apollo Client.
- Built entity analysis: relationship graphs on Cytoscape.js, advanced filters and analyst workflows.
- Dynamic reports and dashboards: Highcharts, Recharts, react-grid-layout; heavy lists and grids with react-virtualized, @tanstack/react-virtual, lazy loading.
- Dynamic reporting module on GraphQL (Apollo Client) tied to the analytics data model and existing Thread Intelligence workflows.

NLMK — Frontend engineer

May 2022 – Jun 2023 | Remote

- Delivered the “Pig iron batch registration” web app for blast-furnace production, consolidating fragmented manual steps into one interface.
- Implemented RBAC over production data and complex tables on TanStack Table: sort, filter, pagination, large datasets.
- Used React Query for caching and background refresh, reducing API load and stabilizing UX.
- Integrated Sentry for error monitoring in production.

Citilink — Frontend engineer

Apr 2021 – Apr 2022 | Remote

- Helped migrate legacy e-commerce sections from PHP/Symfony to Next.js, including catalog and home.
- Built catalog UX: filters, sort, pagination, URL state, user preferences, REST-backed data loading.
- Refined component structure and API usage for more predictable state and stable flows.
- Worked across frontend, legacy backend, and microservices; aligned API contracts for the new site.

In2View — Fullstack / Frontend engineer

Feb 2018 – Mar 2021 | Remote

- Built the In2View B2B platform for respondent discovery and customer-development research: React, Redux Toolkit, Firebase, Vite, Formik, react-router, i18next; marketing site on Gatsby + Contentful with Framer Motion.
- Implemented matching between respondents and clients from reference profiles; end-to-end client and server logic with REST API, JWT, and role-based access.
- Shipped PWA and two-factor auth via Firebase Authentication; reports, tables, filters, and aggregations for corporate users.
- Owned the production MVP: application architecture, RBAC, data storage; evolved codebase structure as the product grew.

Skills

- Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3/SCSS
- Frontend: React, Next.js (SSR/SSG), Redux Toolkit, Redux-Saga, MobX, React Query (TanStack Query), TanStack Table, React Hook Form, Zod, Formik, react-router, Framer Motion, Radix UI, Tailwind CSS
- Complex UI & data visualization: Cytoscape.js, Highcharts, Recharts, react-grid-layout, react-virtualized, @tanstack/react-virtual, Canvas
- Build & frontend infra: Vite, Webpack, Git, monorepos, code splitting, dynamic imports, tree shaking, CI/CD, GitHub Actions, GitLab CI/CD, Jenkins, Docker, Docker Compose, Coolify
- Integrations & backend: REST API, GraphQL (Apollo Client), OpenAPI/Orval, WebSocket, Socket.io, WebRTC, Nest.js (REST, modules, DTOs, TypeORM), Drizzle ORM, PostgreSQL, Firebase (Auth, Functions), Auth.js, JWT/Passport, Node.js, Symfony, Bitrix, jQuery
- Observability & quality: Sentry, Kibana, Grafana, Jest, Vitest, Playwright
- UI & product: design systems and UI kits, Material UI, styled-components, BEM, i18next, Telegram Mini Apps, Figma

Languages

- English — B1
- Russian — native

Education & community

Tula State Municipal Construction College

Land and property (vocational) · 2015 – 2018 | Tula, Russia

Computer Academy STEP

Web development · 2016 | Tula, Russia

Hackathons & community: winner, Digital Breakthrough (2021, 2020); winner, Hack.Genesis ONLINE; finalist, Virus Hack; expert, WorldSkills.
