

Maksim Peshekhonov

Senior Frontend Engineer

Sochi, Russia · Email: kassady71@gmail.com · Phone: +79509196786 · Site: mpeshekhonov.ru · [Telegram: @makusimu_san](#) · [LinkedIn: makusimu](#) · [GitHub: mpeshehonov](#) · Date of birth: 28.05.1996

Available to start ASAP.

About

Senior Frontend engineer with 7+ years building React, TypeScript, and Next.js interfaces for e-commerce, enterprise modules, and product workflows. Strong in complex UI, typed API contracts, production delivery, and code review.

Other work and case studies — in the Projects section on the site. Backend integration: Django REST, Nest.js, PostgreSQL, SQL. Sochi, remote. Available ASAP.

Work experience

POTALONU LLC — Frontend engineer

Sep 2025 – present | Remote

sendonate.com: React product for streamers: Mini App, dashboard, OBS overlay

Role: Designed and built the sendonate.com frontend: three React + Vite + TypeScript clients — streamer dashboard, Telegram Mini App, and OBS overlay. Typed REST client via Orval/OpenAPI, real-time event delivery over WebSocket, and GitHub Actions CI/CD for lint/build/deploy of all clients from one repository.

Outcome:

- End-to-end donation flow in production: Mini App → backend → OBS overlay alert without manual stream refresh
- Orval generates DTOs and API methods from OpenAPI contracts — frontend/backend drift caught at build time
- Unified delivery pipeline for three clients: automated checks, build, and deploy without manual release steps

Stack: React, TypeScript, Vite, REST API, Orval, WebSocket, Django REST, GitHub Actions

POTALONU / PREEGLOS: Ticket storefront and hall layout editor

Role: Built PREEGLOS web storefront on Next.js with checkout, Auth.js, PostgreSQL/Drizzle, and typed REST client via Orval. Canvas/SVG hall layout editor and embeddable seat picker for partner sites; GitLab CI/CD and Docker Compose delivery.

Outcome:

- Ticket purchase in web and Telegram Mini App on shared data model and API contracts
- Partners embed seat picker without forking: hall layout and seat selection in one frontend surface

- Production delivery: Docker Compose environment and GitLab pipeline build and deploy without manual server builds

Stack: Next.js, React, TypeScript, PostgreSQL, SQL, Orval, Docker, GitLab CI

X5 Tech — Frontend engineer

Apr 2024 – Jul 2025 | Remote

NKZ 3.0 — procurement approval: Enterprise React module: RBAC, statuses, long forms

Role: Developed enterprise procurement approval module on React + TypeScript: role-based access via Keycloak SSO, multi-step forms with react-hook-form, typed API layer via Orval/OpenAPI, and internal npm UI Kit components. Participated in code review and split heavy flows into separate chunks via Vite code splitting.

Outcome:

- Frontend covers the full procurement cycle: roles, statuses, forms, and stage transitions
- OpenAPI/Orval made API contracts verifiable at build time instead of manual type updates
- Vite code splitting split heavy approval flows into independent chunks and reduced regression risk

Stack: React, TypeScript, JavaScript, Vite, REST API, Orval, Keycloak, Git

BI.ZONE — Frontend engineer

Jun 2023 – Mar 2024 | Remote

Threat Intelligence: React + GraphQL analytics for SOC

Role: Extended SOC analytics interface on React + TypeScript: GraphQL/Apollo for core data model, MobX/React Query for state and queries, D3.js relationship graph, list virtualization, and Jest regression checks. Participated in code review and UX improvements for complex analytical flows.

Outcome:

- Relationship graph, filters, and reports unified on one analyst workspace
- Single GraphQL data layer for analytics and reports — fewer mismatches between screen and exports
- Virtualization keeps the interface responsive on large entity lists

Stack: React, TypeScript, GraphQL, REST API, D3.js, Jest, Git

NLMK — Frontend engineer

May 2022 – Jun 2023 | Remote

Cast iron release registration: React SPA replacing Excel for production data

Role: Built production SPA for cast iron release registration on React + TypeScript: TanStack Table filters, React Query server state, Keycloak SSO/RBAC for role-based access. GitLab CI checks on merge requests and Sentry for production error diagnosis.

Outcome:

- Core shift operations moved from Excel to a web interface with auth and role-based permissions
- Tables and filters handle production-scale data volumes

- Sentry provides production visibility: errors tied to releases and stack traces without on-site reproduction

Stack: React, TypeScript, TanStack Table, TanStack Query, REST API, Keycloak, GitLab CI, Sentry

Citilink — Frontend engineer

Apr 2021 – Apr 2022 | Remote

citilink.ru — online store catalog: E-commerce migration from PHP/Symfony to Next.js + React

Role: Contributed to citilink.ru e-commerce catalog and homepage migration from PHP/Symfony to React + Next.js: filters, sort, pagination, and URL state for SEO and sharing. Integrated REST API with backend and microservices, worked in yarn workspaces monorepo, covered critical logic with Jest tests, and participated in code review.

Outcome:

- Catalog SEO preserved on Next.js migration: indexable pages and URL-synced filter state
- Retail/wholesale flows via URL-synced filters, sort, and pagination
- Shared npm packages in yarn workspaces reduced duplication across catalog pages

Stack: Next.js, React, TypeScript, JavaScript, REST API, Redux, Jest, Git

Skills

- React, TypeScript, JavaScript, HTML5, CSS3/SCSS, Next.js
- 1C-Bitrix, PHP, jQuery, Webpack, online stores, e-commerce
- REST API, Git, code review, Scrum/Agile, Jest, Playwright
- PostgreSQL, SQL, Django REST, Nest.js

Languages

- English — B1
- Russian — native
